Abstract

The "MU CSE 50" website is a helpful and informative website for computer science students. The purpose of creating this website in the 'CSE-200' project is to benefit at least some people through this project and to make this project useful in real life.

This website was originally created for the 50th batch of the CSE Department of Metropolitan University. Which will serve as an assistant for all students in the 50th batch. All the important things like, all the materials of the class, online tutorials, class routines, result records, easy way to know the result by sending mail at 1 stop (applicable to all batches) and many more services. There is also faculty contact information and bus schedule, which will help all the students of the university. This website has a huge collection of tutorials on various topics. Junior students of 50 batches will especially benefit from this website. They will be able to know all the steps of studying computer science in advance through this website. Reference books, previous exam questions, class materials and tutorials will further their progress. This website has an online IT support center. Through which a user can solve IT related problems by calling directly. Basically this website will be helpful for everyone in one way or another.

1. Introduction

1.1 Project overview:

The 'MU CSE 50' website has been created for the convenience of CSE 50 batch students. Where they will get all the facilities including class material, result, class routine. Moreover, for all batches, there is the facility to know the results, bus schedule, faculty contact information, tutorials and much more.

1.2 Objectives:

The main objective of our project is to make it easier for students to study computer science and to ensure that students have easy access to the right resources. To ensure that those who are new to computer science get the right guidelines.

1.3 Methodology:

The structure of this website is made with HTML. CSS has been used for the design and JavaScript and JQuery have also been used for some more special work. We have taken the help of 'Google Forms' and 'Google Sheets' to take input of different forms. This website uses 'Poppins' and 'Oswald' as fonts, which are taken from Google fonts. 'Owl Carousel' has been used as slider. Also a chart from 'Google Charts' has been inserted.

2. Background

If all the information in a batch is available together, then it is beneficial for everyone in that batch. Moreover, it is better if all the information of the university and the department is available in the same place. Then if there are tutorials on all the topics together, then it is possible to further alleviate the suffering of the students. In addition, new batches that come to the university often do not get the right guidelines. We felt a lot of lack of resources when we were newly admitted.

After all, we wanted to do a project that would work for some people. We plan to do this project considering these issues. We have had to struggle a lot to complete this project, especially in the navigation bar, sending mail at 1 stop, then taking the data input of the form, etc. And finally we were able to do these things.

3. Description of the website

3.1 Homepage

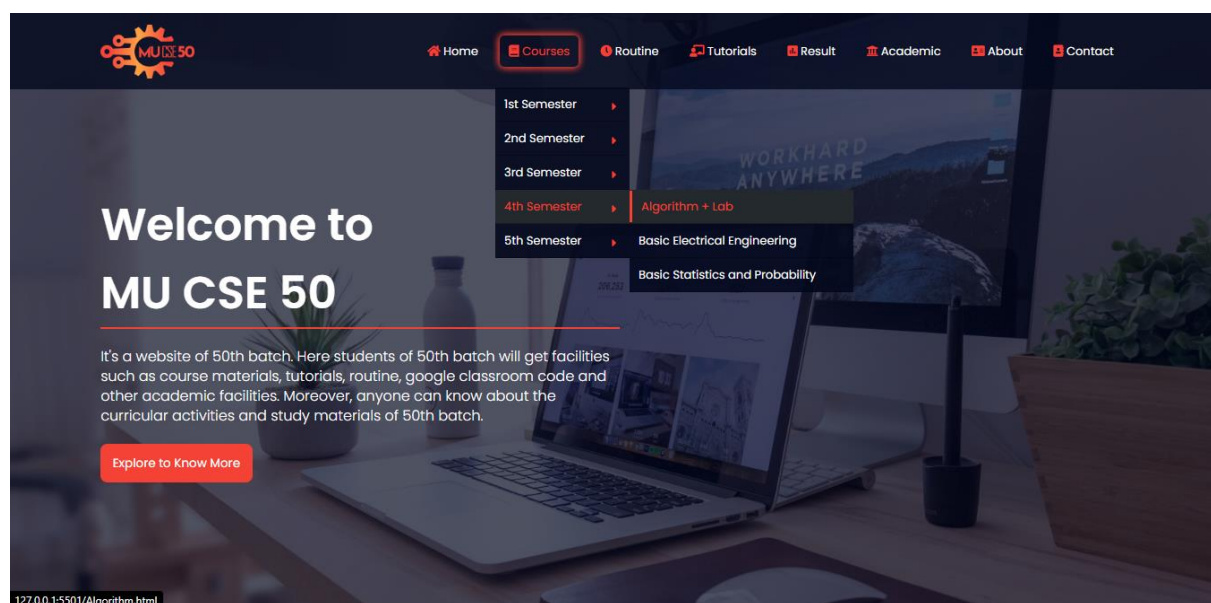

Image: 1

3.1.1 Navigation bar:

The navigation bar acts as a guide to a website. Depending on the navigation bar, how easy it will be for a user to explore this website. So we have used a multi-functional navigation bar on this website. So that there is a link to every page of this website. Some of the menus in this navigation bar have some submenus and in some cases those submenus and more submenus. Hovering over different menus will show submenus. Which is shown in 'Image-1'. We've added an interesting CSS style to the whole navigation bar.

This navigation bar is Responsive for mobile devices. When this website is opened on mobile, a bar icon will appear on the top right side. Clicking on that bar icon will open the navigation bar. Each menu here can be found in a list. When a menu is clicked, its submenus will gradually open at the bottom. Which is shown in 'Image-2'. Menus that do not have a submenu will be taken directly to the address of that menu. We've added icons and hover effects to make this navigation bar more attractive. The navigation bar will be the same on every page of this website.

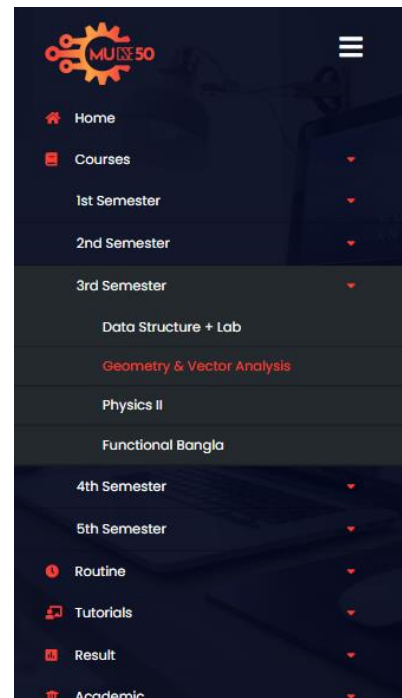

Image-2

3.1.2 Header image slider:

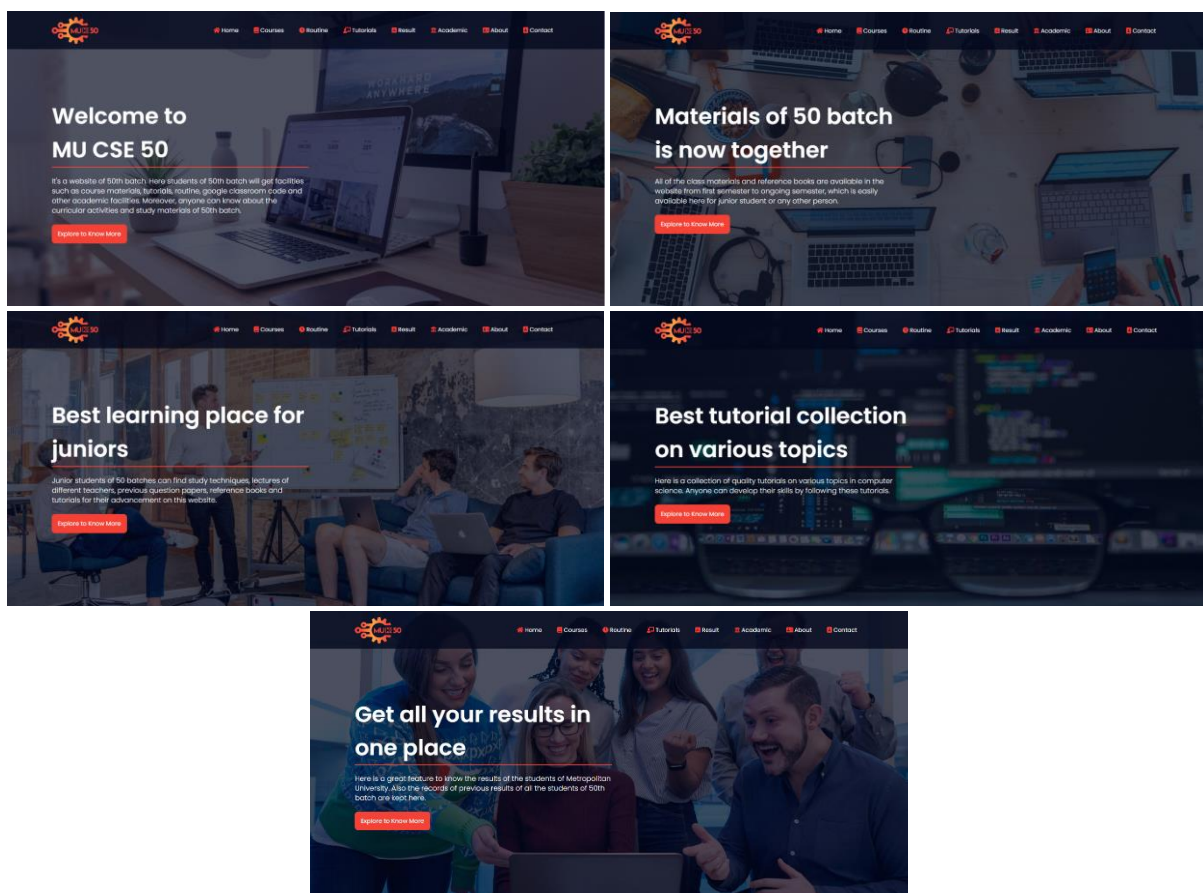

Image-3

We have added header text and image slider just below the taskbar on the homepage. This text slider gives an overview of the top 5 features of this website. Images and texts change automatically every 4 seconds. And the image has a zoom out effect. Which will make the website more attractive. There is a button which, if clicked, will take you to the next step of the page. These five slides are given in phases in 'Image-3'.

3.1.3 Today's Class Routine:

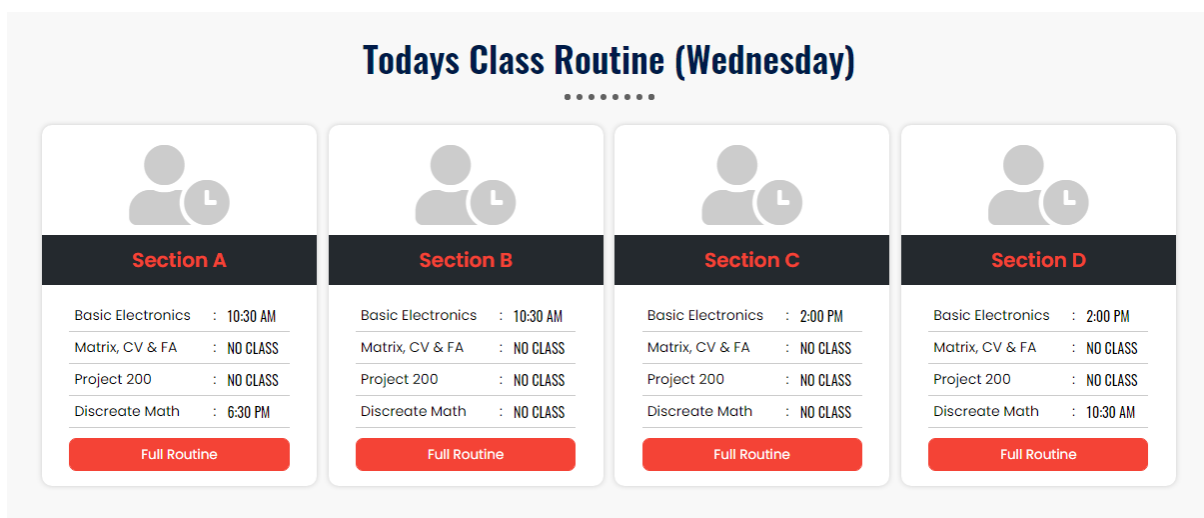

Image-4

In this part of the homepage we have arranged to do a daily routine show of four sections. Here are four cards for the four sections. The times of this routine will change automatically every day. Which is shown in 'Image-4'. Each card has a button at the bottom. Clicking on the button will open the whole routine page for that section. Icons and a hover effect have been added to make the cards look attractive. When this website is browsed on mobile, two cards will show together. Which is shown in 'Image-5'.

Image-5

3.1.4 Current Courses:

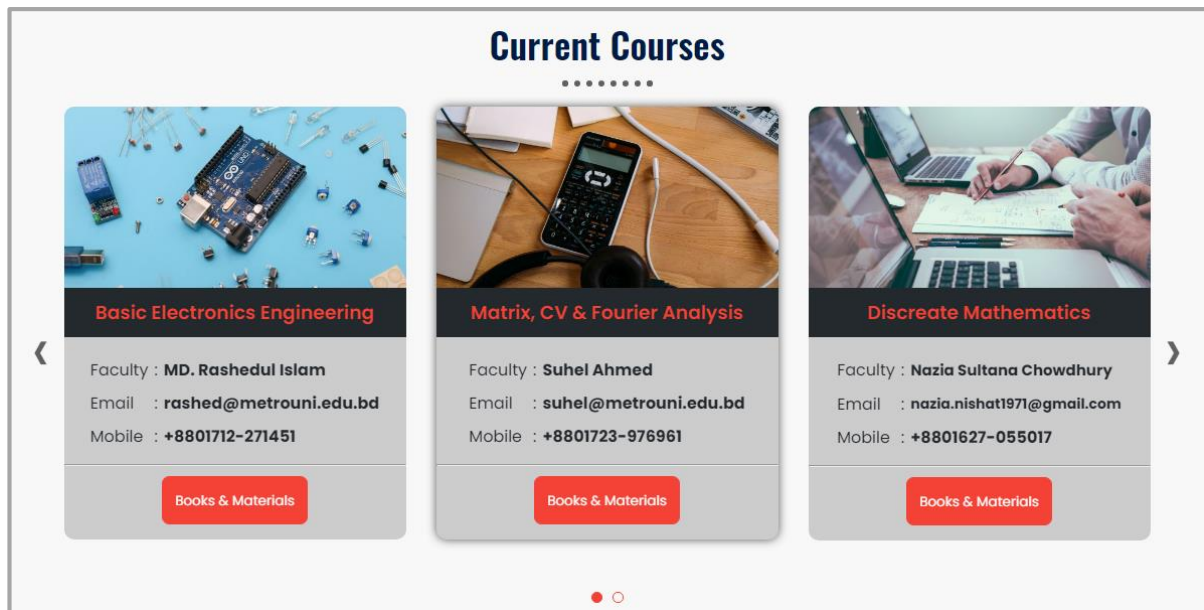

Image-6

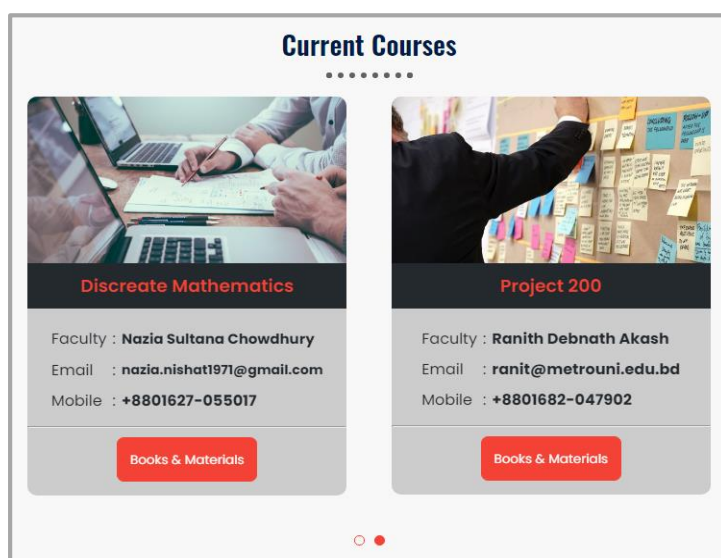

Image-7

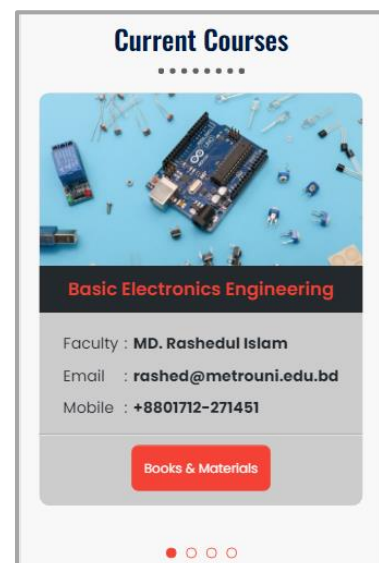

Image-8

In this part of the homepage, we've added information on 50 batches of running courses. We created separate cards for each course and added those cards as sliders. There is a button to get the course name, faculty contact information and all the materials of this course. Clicking on the button will open the full material page. These cards will show 3 cards for the big screen, 2 for the medium screen and 1 for the small screen. This section is shown in 'Image-6', 'Image-7' & 'Image-8' periodically.

3.1.5 Tutorials:

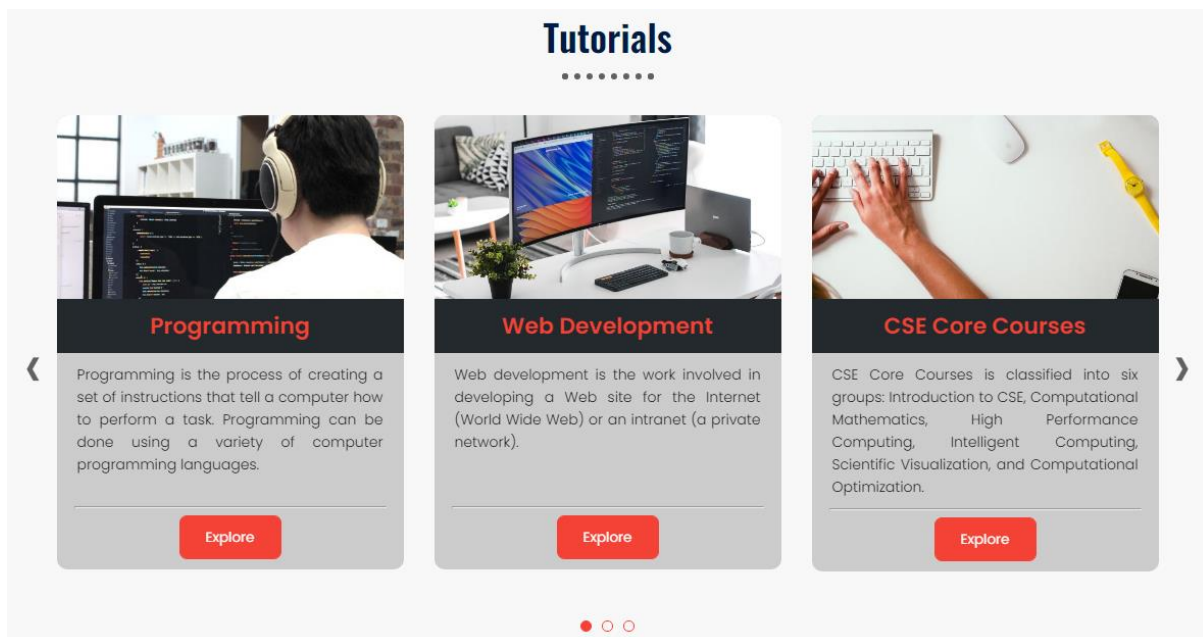

Image-9

The tutorial section of the homepage represents the tutorial pages of this website. This website includes tutorials on programming, web development, CSE core course, Android app development, UI / UX design, graphic design, video editing. There is a card on the homepage for all subjects. Here is a brief description of the subject on the cards and a button has been added. When this button is clicked, the tutorial page of this website will open. The tutorial cards are designed in the same way as the course cards on the homepage, with a slider attached, and similarly it will work as a course section for all devices. 'Image-9' shows some parts of it.

3.1.6 Skills of student's statistics:

Image-10

This part of the homepage gives a brief description of the skills of our batch students. The left has a heading and a paragraph and the right is represented by a chart. In case of big screen, paragraphs and charts will show side by side. As shown in 'Image-10'. When this page is opened on mobile, the chart below the paragraph will show. As seen in 'Image-11'.

Image-11

3.1.7 IT support center:

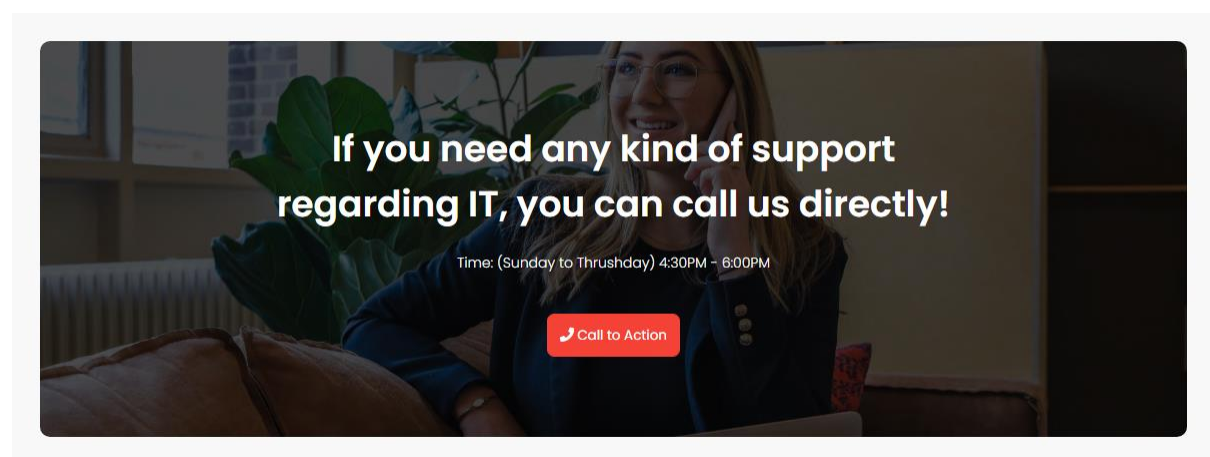

Image-12

Students will be able to solve any kind of IT problem from this website. The time of support is specified which is showing here and there is a button. By clicking on this button the user can call us directly. Will look like 'Image-12' for large screen and will look like 'Image-13' for small screen.

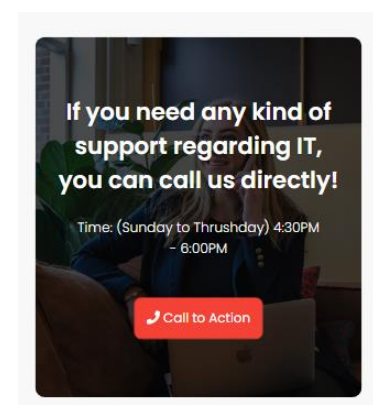

Image-13

3.1.8 Footer:

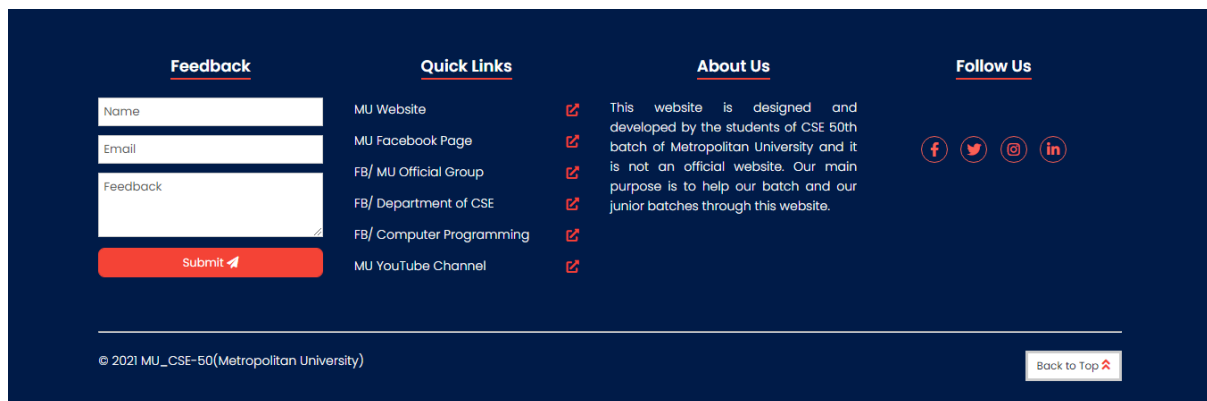

Image-14

The bottom part of a webpage is usually called the footer. The footer section of this website will be the same for each page. We have divided the footer section into four parts. First I have given a feedback form where the user can give feedback. Then we added some quick links. Here are some important links from the university. Then we added a short paragraph about this website in

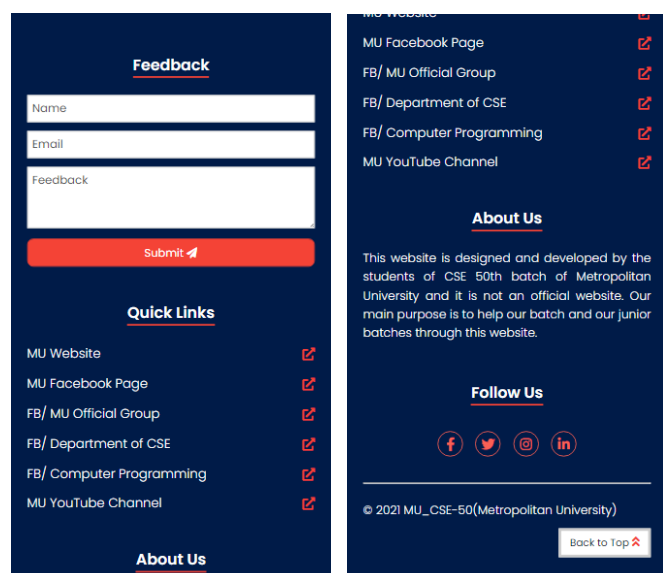

Image-15

'About Us'. Then we added some social media links. Then below I added the copyright message and the 'back to top' button. By clicking on this button a user can go to the top of the page again. Here 'Image-14' and 'Image-15' show desktop view and mobile view respectively.

3.2 How a feedback or contact form works

Feedback and contact on a website is a very important issue. A user may need to contact the owner of the website or give feedback about the website. For the convenience of the user, we have used the form for feedback and contact on this website. We have adopted a special method to store this data. That is, we have linked the HTML form with the Google form. When a user gives data input in HTML form, it will be received by Google form and after the data is stored in Google form, we can see it in Google sheet. The process is shown by 'Image-17'. When the form is submitted, it will show a success (Image-16) message, otherwise it will show error message.

3.3 Course pages (*all semesters*)

The course pages of this website include every completed and ongoing course of the CSE 50 batch. There are separate webpages for each subject. Where course teacher information, course outline, reference book, exam questions and all class material can be found. Links to online tutorials on some subjects can also be found on these pages.

3.5 Tutorial pages

This part of the website contains tutorials on various topics. Here we have linked the tutorial separately for each topic and gave an initial idea about each topic. Here we have presented the pages of the tutorial in two ways. We have presented the pages of tutorials on programming, web development, CSE core courses, graphic design, video editing in one way and the pages of Android app development and UI / UX design in another way. These two methods are described below.

3.5.1 Programming, Web development, CSE core courses, Graphic design, Video editing:

On these pages we made a separate card for each topic and gave a basic idea about the topic and added a button to enter the link of the tutorial. By clicking on the button the user will be able to enter the link of the tutorial and it will open in a new tab.

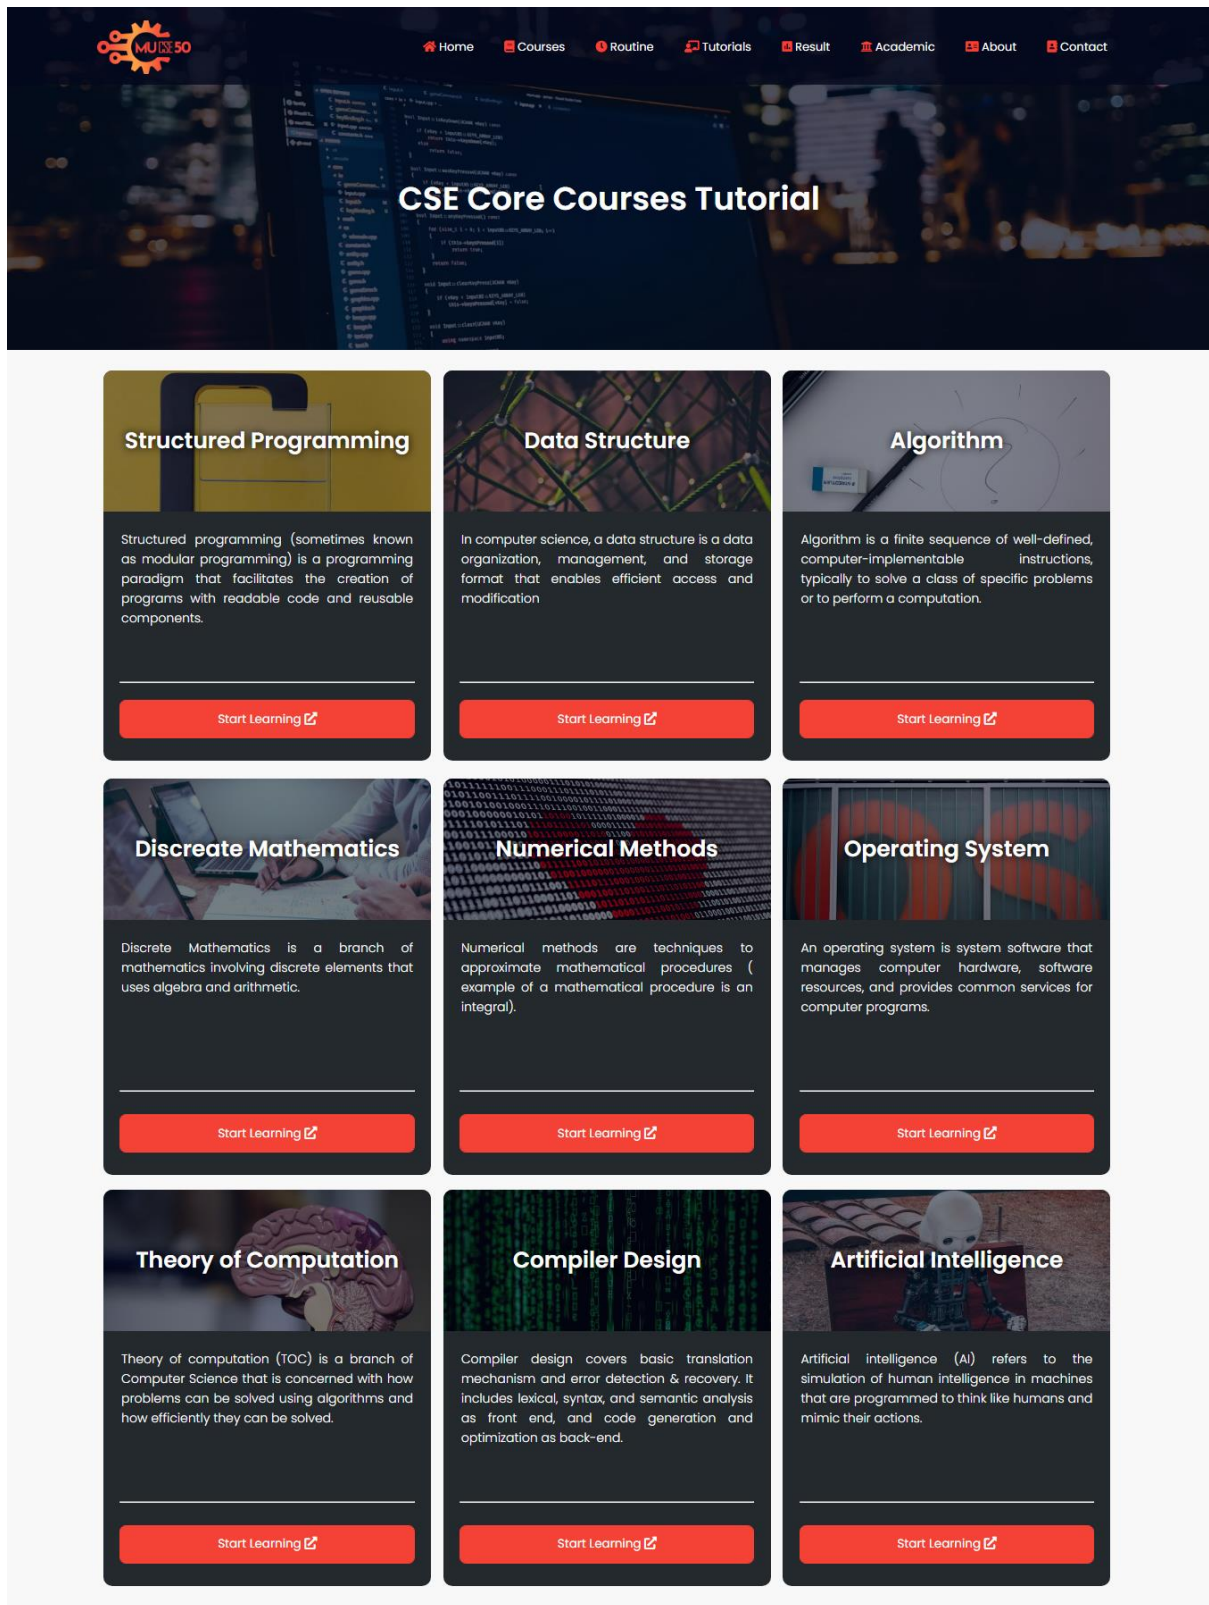

Image-23

'Image-23' shows the desktop view from the beginning of a page to the top of the footer. Here are three screenshots merged. This image gives a detailed description of a tutorial page. This is how the pages of each tutorial are designed and working in the same way.

This pages are also responsive for small screen devices. 'Image-24' shows how this page looks after opening on mobile. Here are three consecutive screenshots from the left representing the view of the mobile.

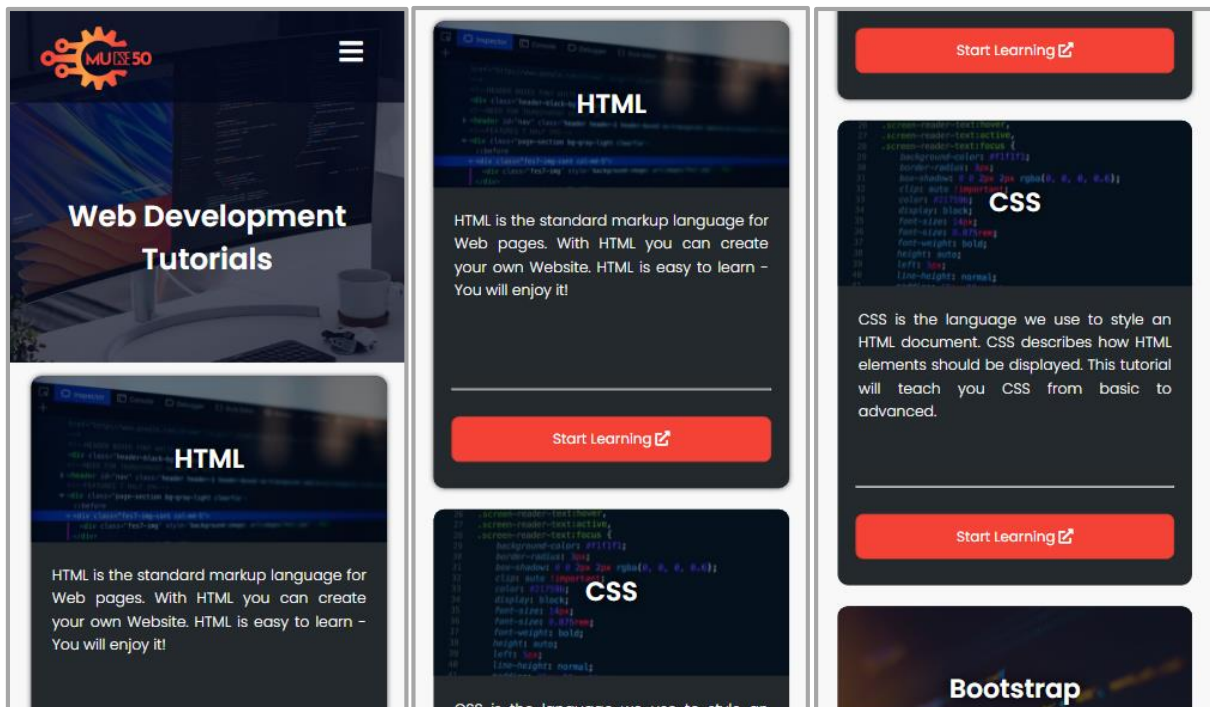

Image-24

3.5.2 Android app development, UI / UX design:

We've redesigned the Android App Development and UI / UX Design tutorial pages a little differently. Here on the left I have given a detailed account of this subject and mentioned some of the reasons for learning this subject. Added a button on the right and added a nice CSS style with background image to the whole div.

'Image-25' shows the desktop view from the beginning of a page to the top of the footer. Here are two screenshots merged. This image gives a detailed description of these pages on desktop view.

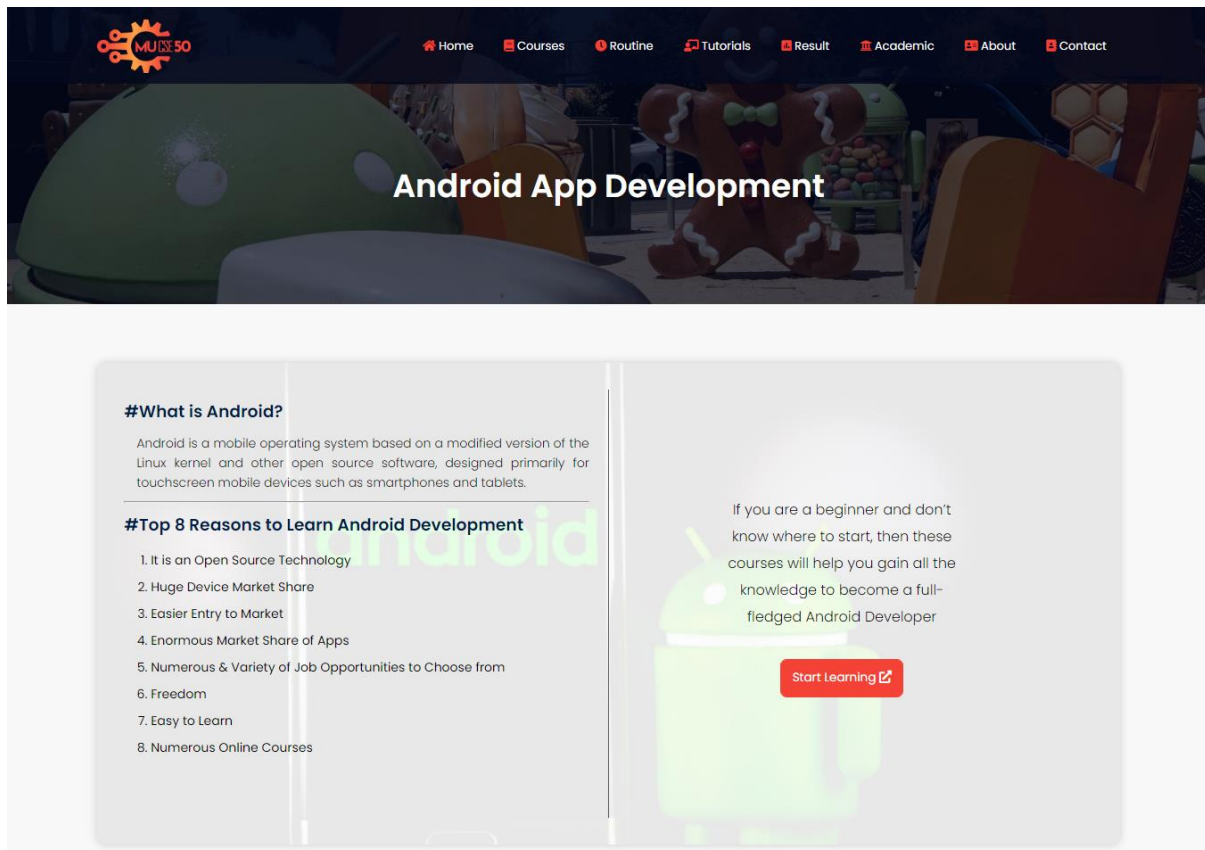

Image-25

This pages are also responsive for small screen devices. 'Image-26' shows how this page looks after opening on mobile. Here are three consecutive screenshots from the left representing the view of the mobile.

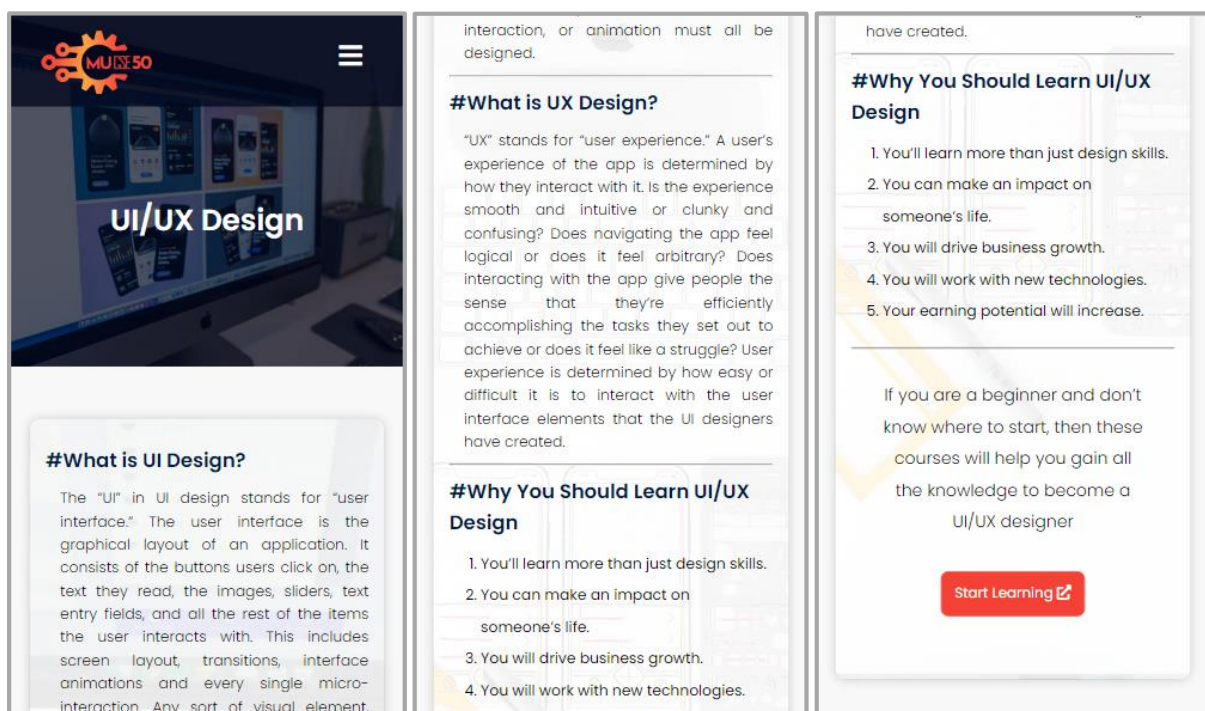

Image-26

3.6 Results

3.6.1 previous result records

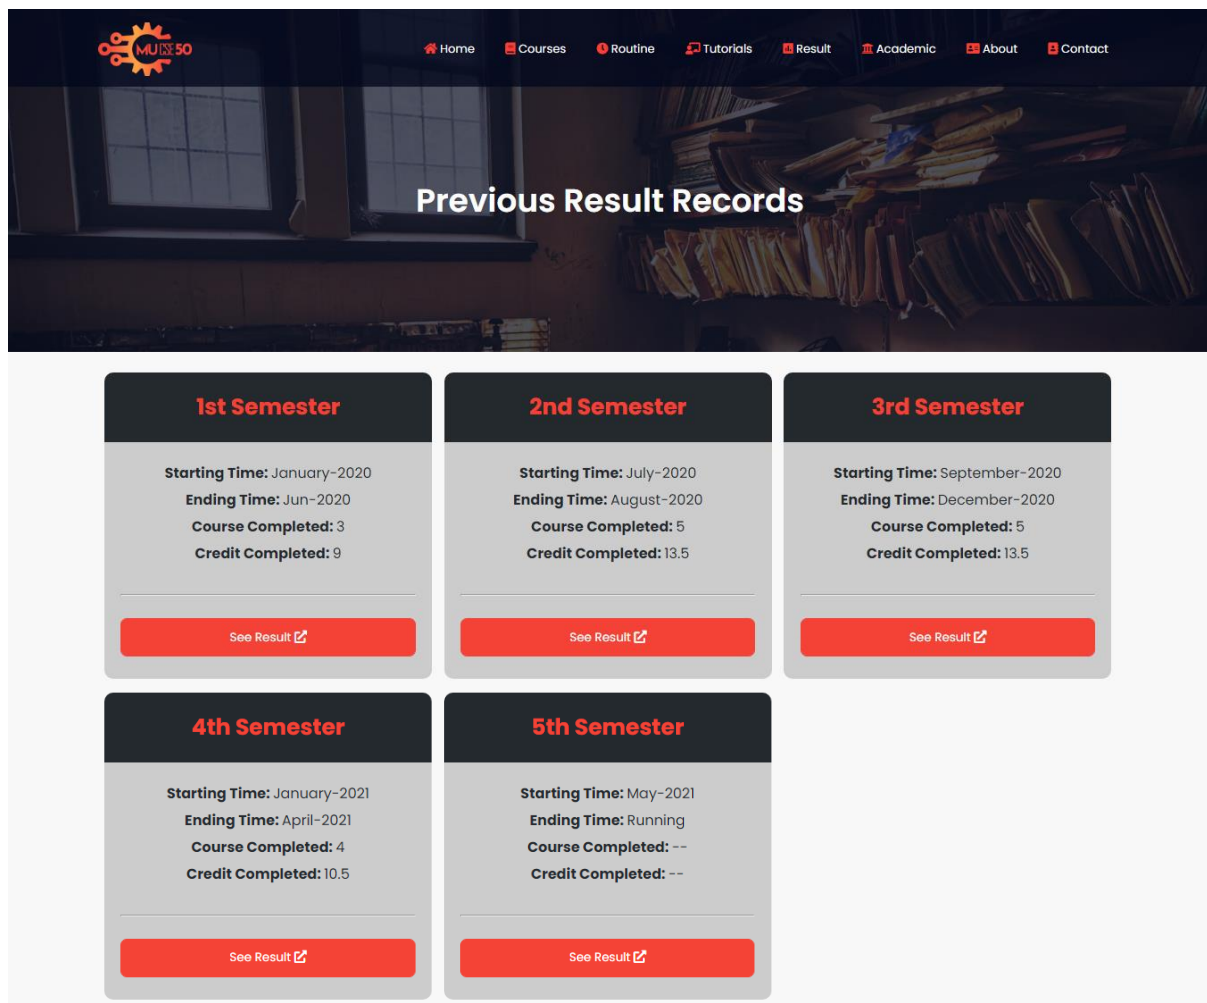

Image-27

In this part of the website, we have added the record of the results of the 50th batch completed semesters. In this part of the website we have added the record of the results of the 50th batch completed semesters. Information is provided separately for each semester. For example: Starting time, ending time, completed credits, completed courses. Finally, a button is provided by linking to the PDF file of the result. Clicking on the button will open the file in a new tab. 'Image-27' shows the desktop view from the beginning of this webpage to the top of footer. Here are two screenshots merged.

This pages are also responsive for small screen devices. 'Image-28' shows how this page looks after opening on mobile. Here are two consecutive screenshots from the left representing the view of the mobile.

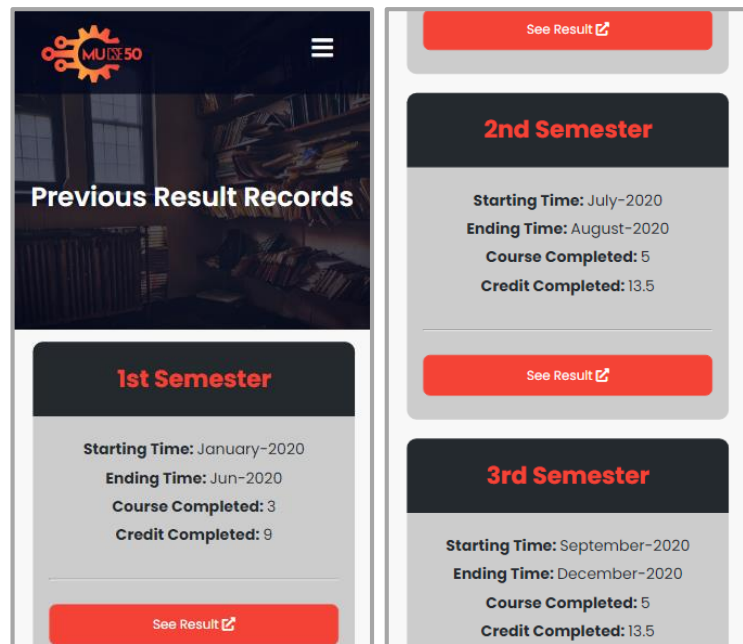

Image-28

3.6.2 1-Stop service

Image-29

The One Stop Service page has two options. 'Image-29' shows the desktop view of the page. There is a form on the left. When this form is filled and submitted by the user, a mail will be sent to the 1-stop service of the university for the result and the user will also receive a mail. We did this via mail merge on Google Sheets. It will also show a success message after submitting the form. There is a button on the right. Clicking on it will open the mailing app on the device with 1-stop mail. In the case of the form, the mail that will go to 1-stop is shown in 'Image-30' and the mail that the user will receive is shown in 'Image-31'.

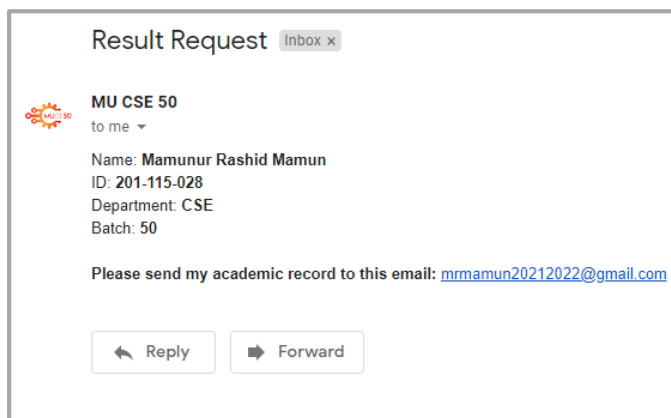

Image-30

Image-31

This page is also responsive for small screen devices. 'Image-32' shows mobile view after form submission. For mobile, the form is at the top and the custom mail section is at the bottom.

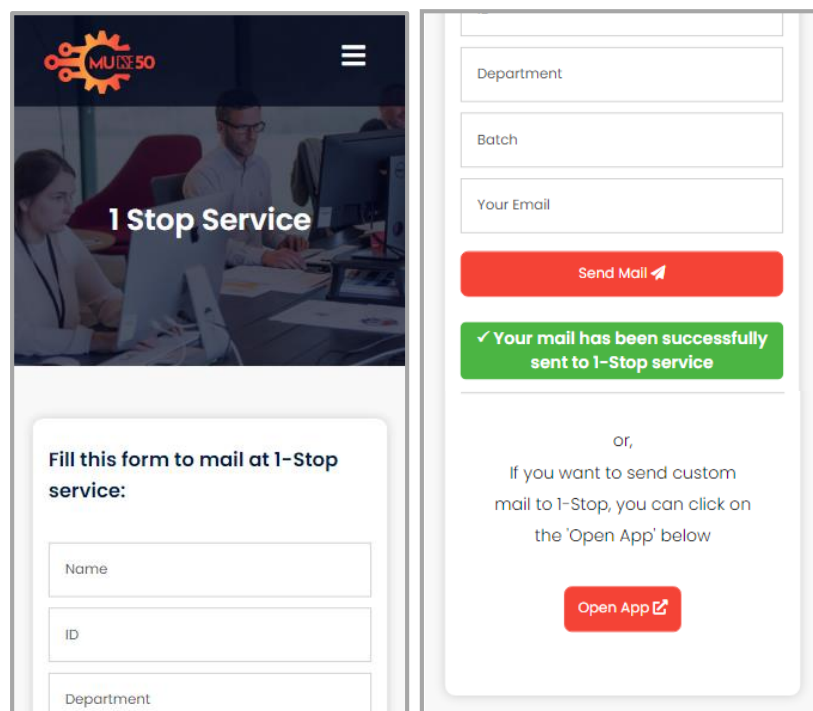

Image-32

3.7 Academic

3.7.1 Faculty Contact Information:

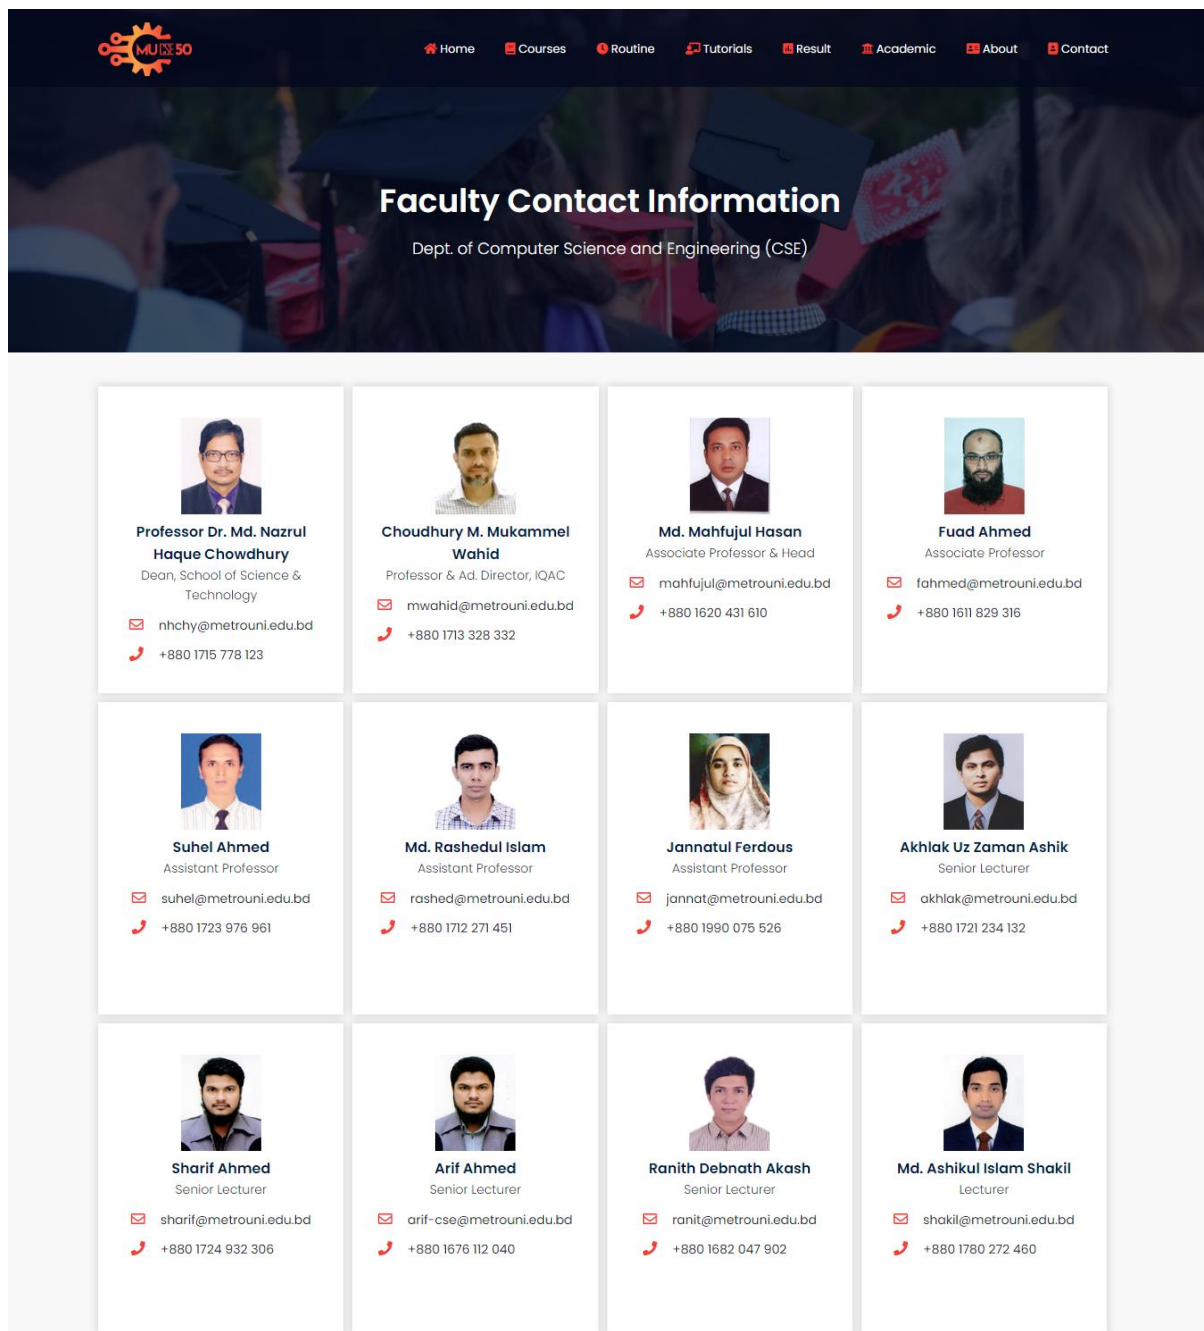

Image-33

The Faculty Contact Information page contains the names, surnames, emails and mobile numbers of all the teachers of the CSE department along with their pictures. 'Image-33' shows the desktop view of this page. Where 2 screenshots have been merged. Below is the footer section, which is not shown here.

This pages are also responsive for small screen devices. 'Image-34' shows how this page looks after opening on mobile. Here are two consecutive screenshots from the left representing the view of the mobile.

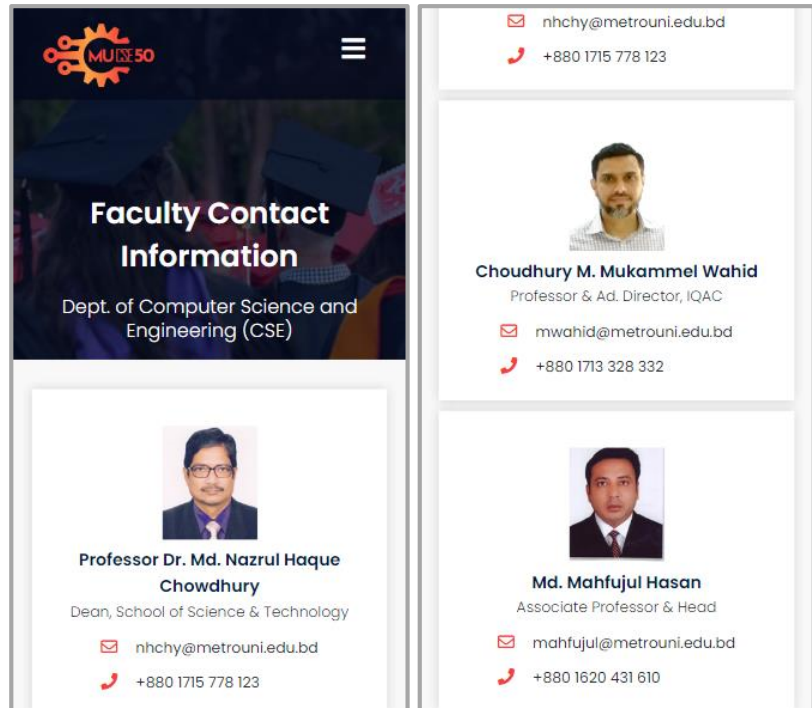

Image-34

3.7.2 Bus Schedule

The bus schedule page provides bus routes and bus times for teachers and students. Here the main part of this page is divided into 2 parts, the bus route on the left and the bus schedule on the right. Bus departure and arrival times are specified separately.

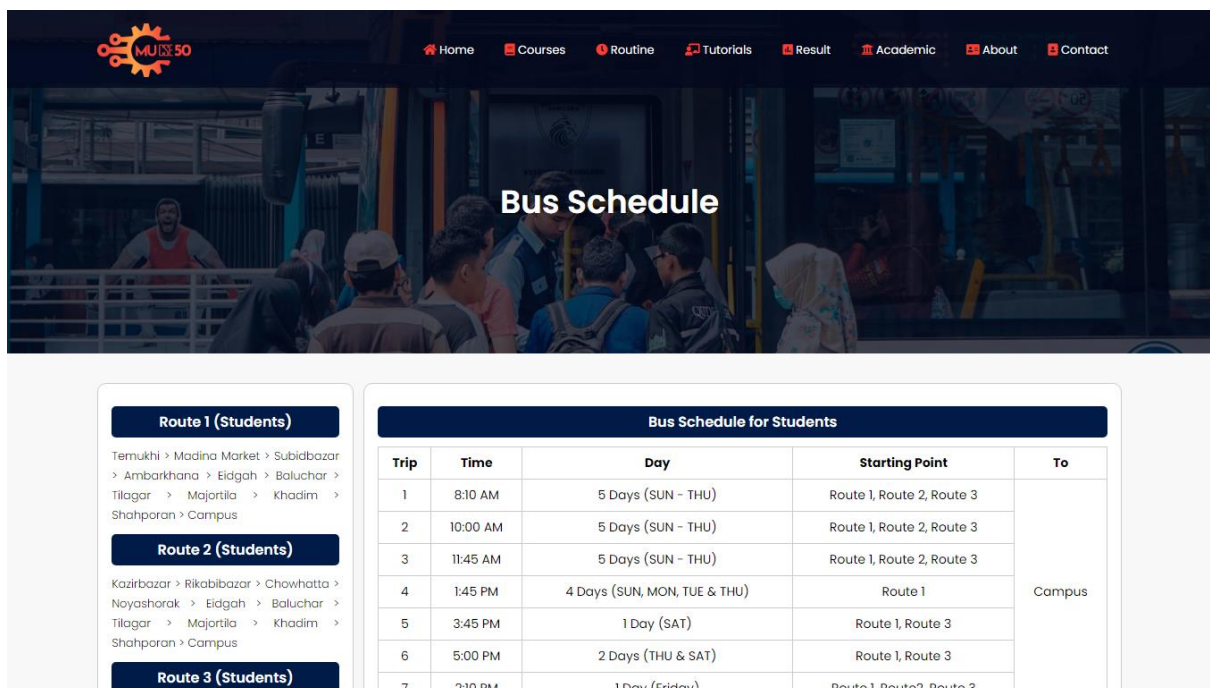

Image-35

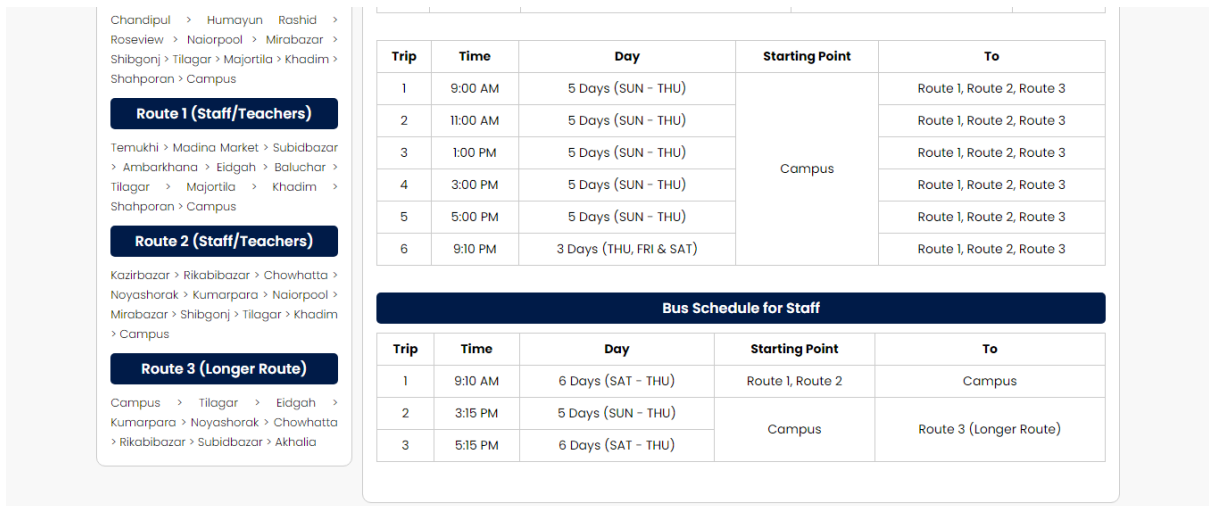

Image-35

'Image-35' shows a desktop view of the bus schedule page. This image has 2 screenshots merged and has a footer below which is not shown here.

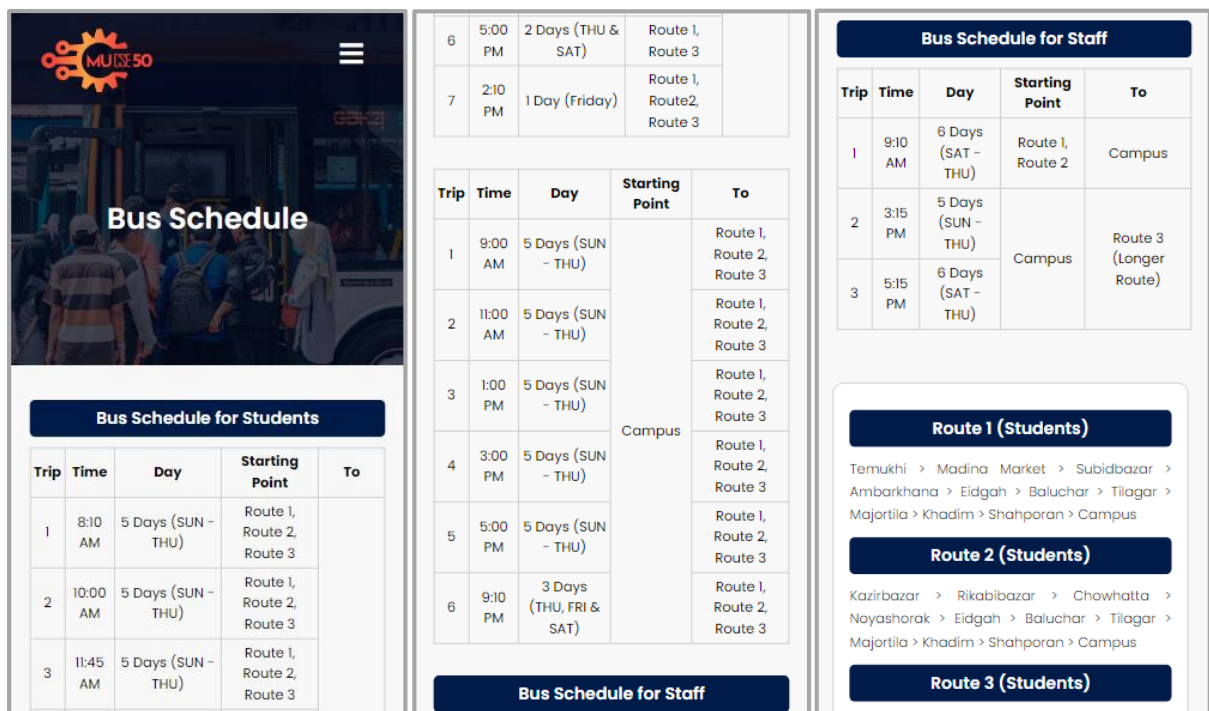

Image-36

The page is showing in 'Image-36' when opened on mobile. The mobile will first show the bus time and then the bus route.

3.8 About

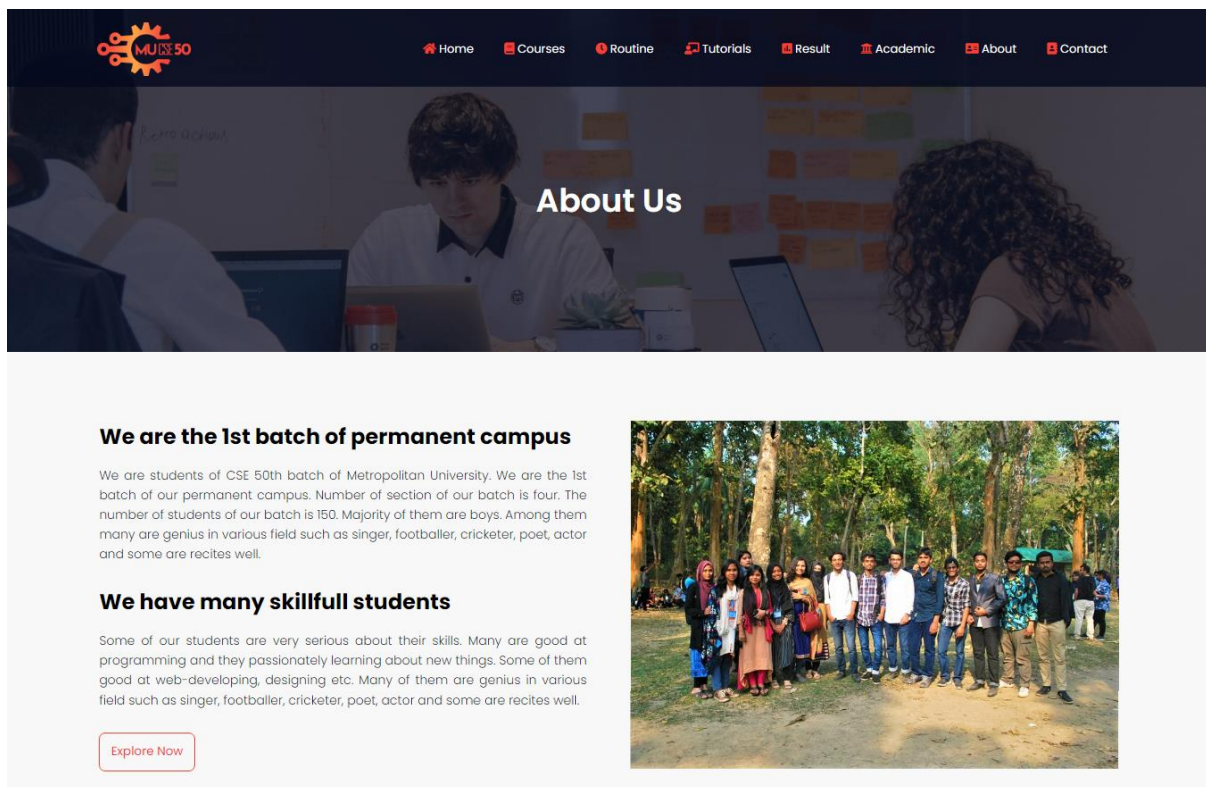

Image-37

The 'About us' page contains some text about the CSE-50 batch of Metropolitan University and a group photo. 'Image-37' shows the desktop view of this page.

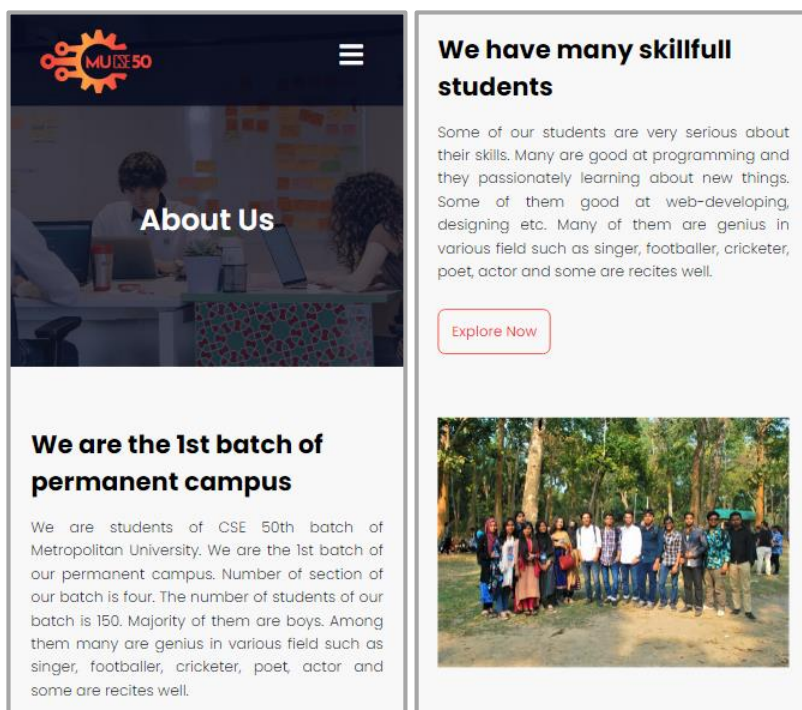

Image-38

This pages are also responsive for small screen devices. 'Image-38' shows how this page looks after opening on mobile. Here are two consecutive screenshots from the left representing the view of the mobile.

3.9 Contact

On the contact page, we first added the location of the Metropolitan University through Google Maps. Then we divided the part into two parts. In the first part we gave contact information and in the next part we gave a form to contact us. Users will be able to send us a message by filling out and submitting the form. [Page 11: 3.2] shows how this form works or takes data input. 'Image-39' shows the desktop view of this page. Here are 2 screenshots merged.

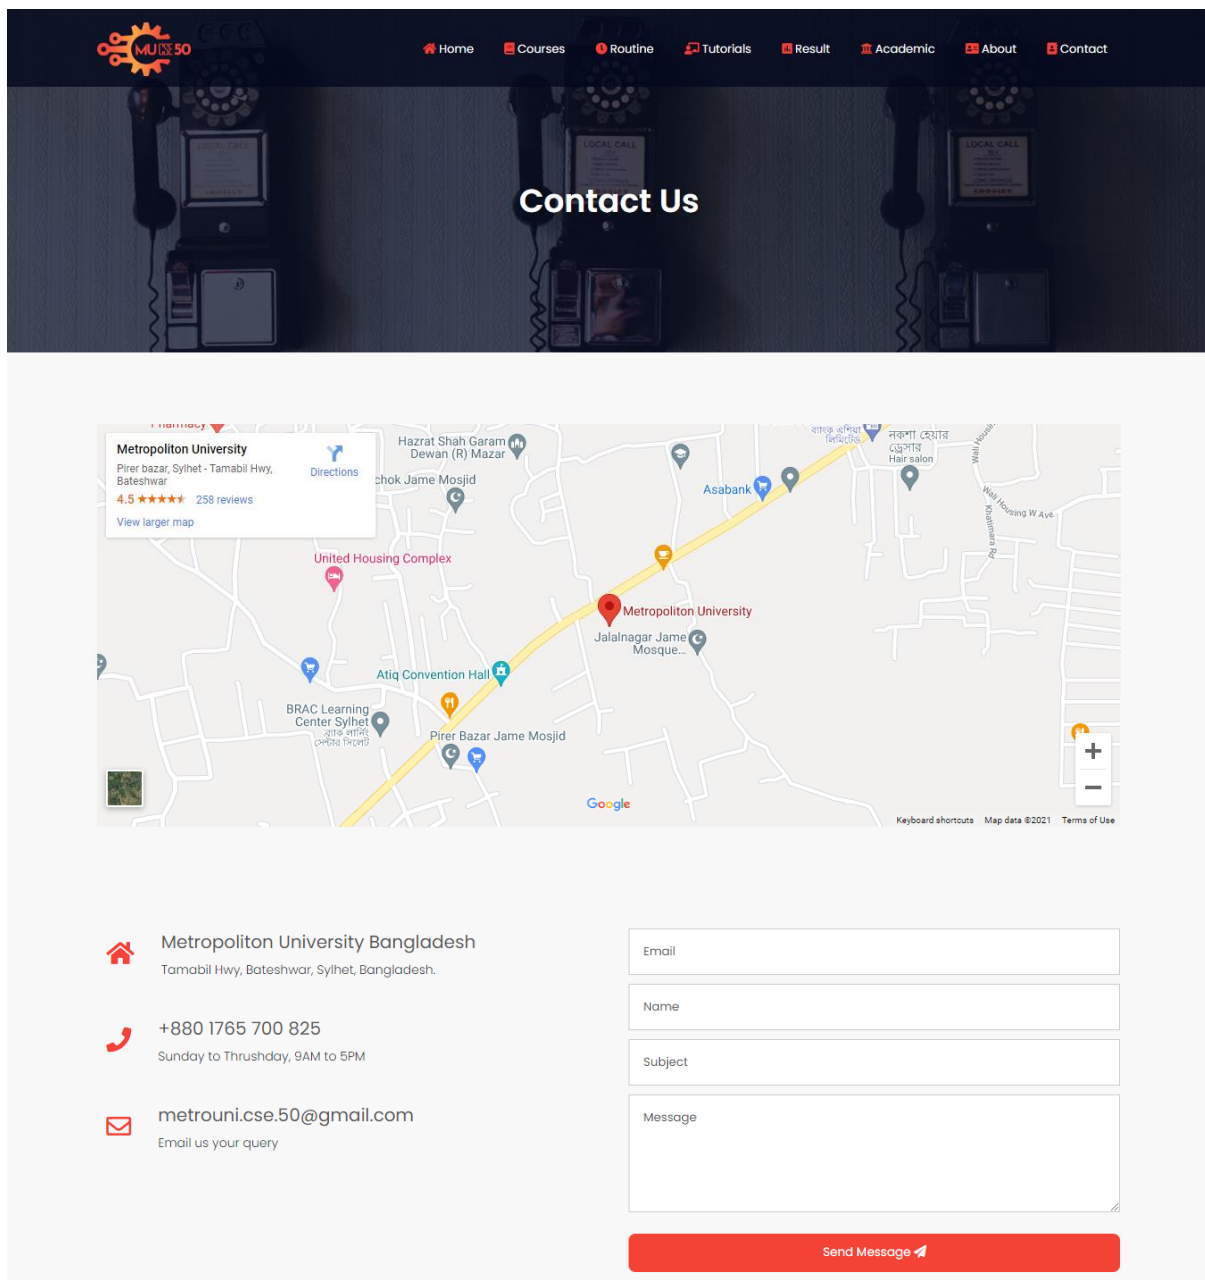

Image-39

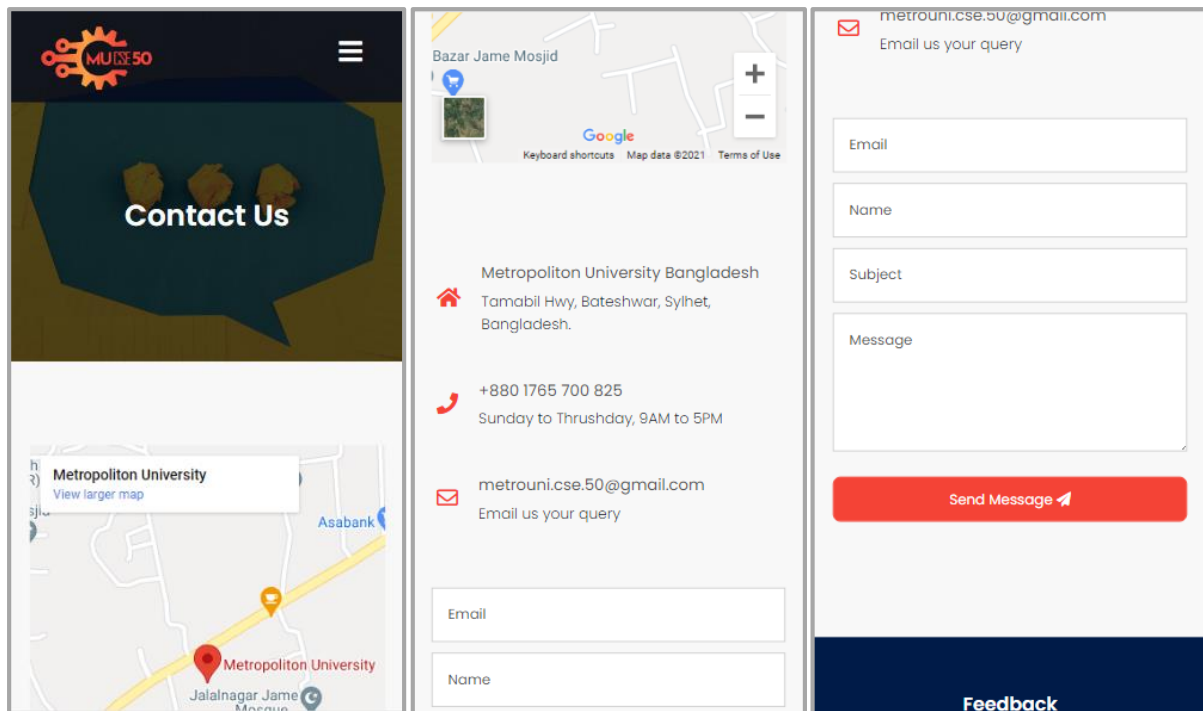

Image-40

This pages are also responsive for small screen devices. 'Image-40' shows how this page looks after opening on mobile. Here are three consecutive screenshots from the left representing the view of the mobile.

4. Conclusion

The project titled 'MU CSE 50' is a website that deals with issues related to a batch.

- ✓ This project is successfully implemented with all the features mentioned in the specification.
- ✓ The website provides appropriate information to the users according to the selected service.
- ✓ The project is designed keeping in mind the daily problems of a batch.
- ✓ This project will help reduce unnecessary waste of time.

5. References

Below are the references to the source or website from which the elements of the website have been collected:

- The images that are commonly used on this website are taken from 'unsplash.com'.
- The pictures used by the teachers are taken from the official website of the Metropolitan University.
- The icons used on the website are taken from 'fontawesome.com'.
- The fonts used on the website are collected from 'Google fonts'.
- The 'Owl-Carousel' slider has been used to add sliders.
- 'Google charts' are used to use charts on the homepage.
- All code is written through Visual Studio code.
- Also 'Adobe Illustrator' for logo design and 'Adobe Photoshop' for some image editing.
